Dear Dr. Purdy,

We are writing to support the promotion of Dr. Attila Csenki to the position of Senior Lecturer, in view of his significant contributions to fields in which we are active researchers. In a paper (in progress), “Numerical solution of semi-Markov processes: a review” we will be referring to his work [1] and [2] on numerical techniques for transform analysis of semi-Markov processes. We have also drawn upon Dr. Csenki’s work on flowgraphs and related graph-based methods for our own flowgraph work, e.g., [5], and our presentation at the forthcoming Joint Statistical Meetings, “Graph-theoretic analysis of complex stochastic networks.”

The body of work by Dr. Csenki indicates not only that he is a first-class researcher in several important fields, but also a careful expositor who brings clarity to complex topics; therefore we strongly support his promotion to Senior Lecturer.

Sincerely,

David H. Collins, PhD
